**WOC 2009 New Product!**  
**MULTI-LANGUAGE BATCH CONTROL**  
**SOFTWARE VIA INTEGRA BATCH**

For Immediate Release  
John Rabchuk, Systech  
630-515-0200

Integra Batch, the technology leader in automated batch control systems, is now available in multiple languages.

“This is one of the first steps in our strategic plan to expand Systech globally,” explained John Rabchuk, president of Systech. “We are focusing considerable energy on expanding our market focus into Latin America, and this initial development project is just the first step of implementing that strategy.”

Integra Batch has evolved into the industry's most innovative and complete ready mix plant control panel system. The newest enhancements include the multi-lingual user interface screens for pre-batch, batch progress, scale/meter set-up and more. New Mix Master functionality enables operators to make global changes to mixes – changing admixture suppliers across all mixes, for example, or replacing the sand for all mixes produced at a certain plant.

The latest version of Integra Batch also featured enhanced free-fall calculations that improve system accuracy and speed.

Systech will be showcasing Integra Batch and the complete suite of Integra software modules at the 2008 World of Concrete exhibition in Las Vegas, Feb 3-6. Booth N951, North Hall, Producers Center.

Based in Woodridge, IL, Systech is the leading provider of fully Windows® compliant dispatch, billing and batching systems for construction materials producers. For additional information: contact Sandy Cavazos, Systech 630.515.0200
